

# How Big is the Sky?

by Kimberly Brown

which things can be measured?  
which things cannot?

Can you match the instrument with its name and what it's used to measure?

clinometer

time intervals

barometer

direction - relative to magnetic North

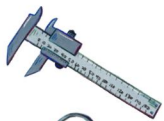

stopwatch

angle of elevation compared to the horizontal line

shark egg

atmospheric pressure

multimeter

blood pressure

compass

nothing

sphygmomanometer

electrical current

calipers

small distances (width, length, depth, diameter)
